**Ipswitch Messaging Announces Release of IMail Server Version 10**

**Augusta, GA – April 21, 2008** – Ipswitch Messaging Division released IMail Server Version 10 today. This is the first major update for IMail since 2006.

“We worked very hard to improve our product,” says Tripp Allen, President of Ipswitch Messaging Division. “Most of the problems and bugs that have been associated with previous versions have been fixed, and many new features have been added to Version 10 to make it even smarter.”

A host of new features are utilized in IMail Server Version 10. Ipswitch has developed its own Digital Rights Management tool to protect licensing and to secure delivery of messaging software. Password complexity and suspended accounts from multiple failed logins also improve security.

“Web Messaging Lite, our new low-bandwidth web client, is our solution for slow internet connections,” says Allen. “It will allow those customers with dial-up or other sluggish connections to access their mailboxes more quickly.” A new feature that is available only in Web Messaging Lite is the “check all” preference, which allows users to mark all messages on a current page or in an entire folder. New user interfaces for contacts and preferences make Version 10 more user-friendly. Other ease-of-use features are improved web calendaring and domain forwarding.

“Version 10 is the most intuitive product ever developed by the Ipswitch Messaging Team,” says Allen. “For this new version we decided to respond to customer feedback and implement the features they wanted the most.” One such feature is the checkbox display setting. Users can now easily select/delete messages with one click.

IMail Server was recently voted Messaging Product of the Year by the readers of *Network Computing* magazine for 2008. For a complete list of new features and fixes for IMail Server Version 10, please read the release notes at [http://docs.ipswitch.com/\\_Messaging/IMailServer/v10/ReleaseNotes/index.htm](http://docs.ipswitch.com/_Messaging/IMailServer/v10/ReleaseNotes/index.htm).

**About Ipswitch Messaging Division**

Ipswitch IMail Server delivers crucial communication and collaboration tools without the high acquisition and ongoing administrative costs of systems designed for large enterprises.
